

## ST-RB

### SPEC SHEET

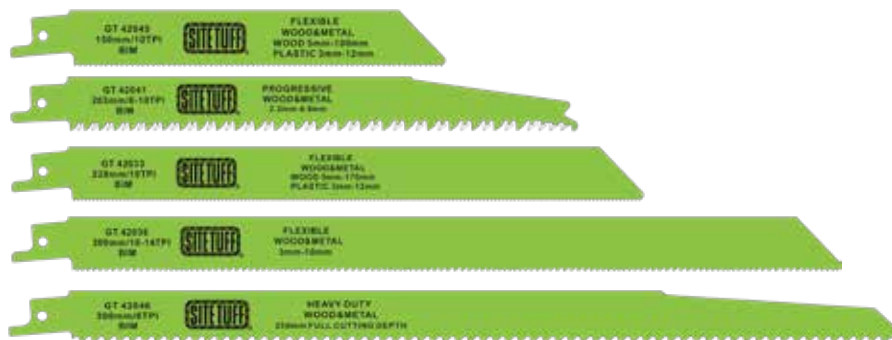

### Metal Cutting

### Wood Cutting

### Wood & Metal Cutting

### Specialist Cutting

**DESCRIPTION:** Developed for use across the trades, the SiteTuff range of Reciprocating Saw Blades deliver fast, reliable cutting in a wide range of common materials, such as Wood, Nail Embedded Wood, Steel, Non-Ferrous Metals, Plastic and lightweight building blocks.

**FEATURES:**  
Universal 1" S-Shank Fitting, each blade is produced with precision engineering for specific applications to ensure it's optimum performance.

**MACHINE SUITABILITY:** Most popular reciprocating saws, including Bosch, Makita, DeWalt, Milwaukee and Erbauer.

- USER TIPS:**
- Ensure you select the correct blade for your task
  - Always wear the appropriate PPE
  - Disconnect the power/remove the battery prior to fitting or removing blade
  - Adjust the shoe to the desired cutting depth and ensure that it is firmly placed against the material before cutting
  - Always use two hands to hold and support the machine whilst in use
  - Most reciprocating saws have a variable speed trigger. Start slow and increase the speed as you cut
  - Allow the blade to make the cut - Excessive downward pressure will slow the cutting speed and increase the risk of the blade overheating, prematurely blunting the blade
  - When cutting metal, a little lubrication oil will aid performance and increase blade life
  - When plunge cutting, rest the machine shoe and tip of the blade directly on the material, in line with the cut. Start cutting slowly and increase the speed as the blade penetrates into the material.

**PACKAGING DETAILS:**  
Full colour cardboard sleeve.
